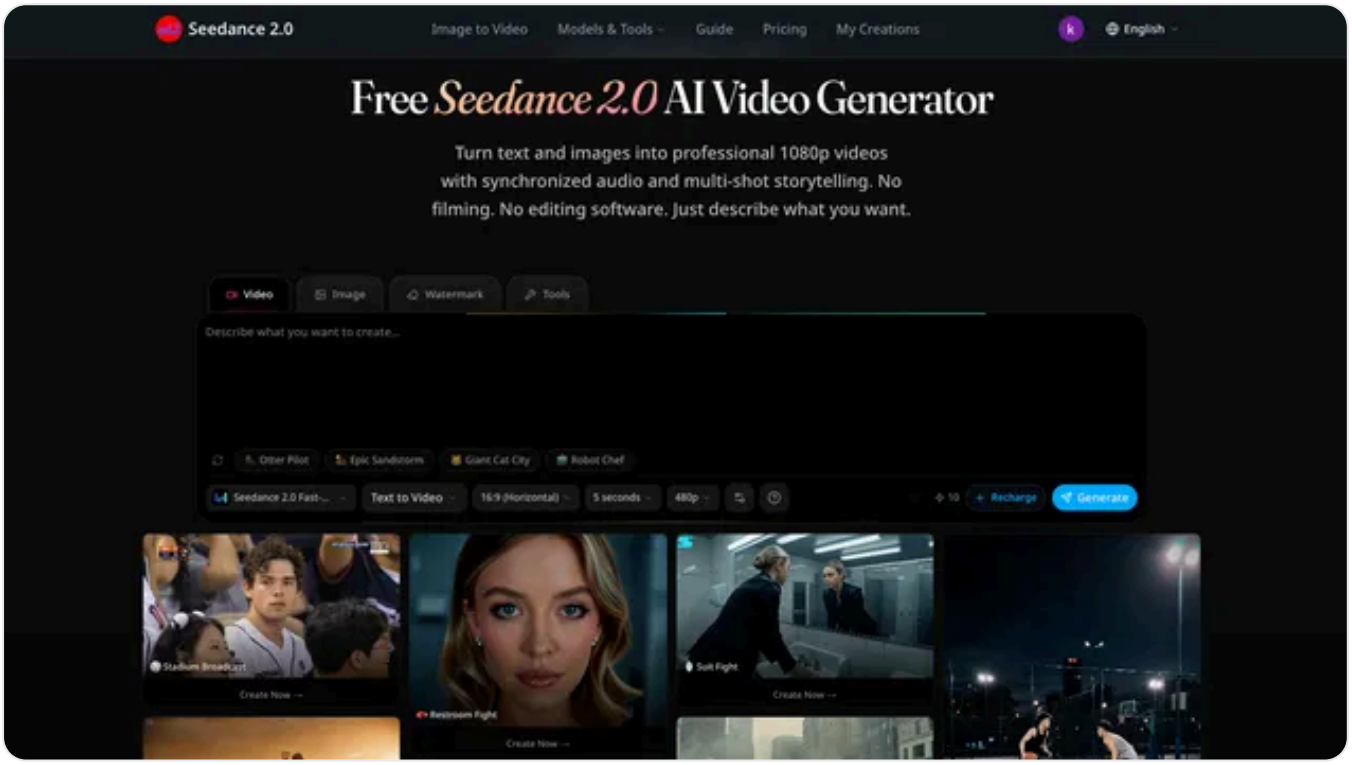
Seedance 2.0 on ClipDance

An AI video generator for turning text, images, and references into cinematic 1080p clips with native audio.



About

Seedance 2.0 on ClipDance is an AI video generator for making cinematic clips from text and images. It focuses on 1080p output, synchronized audio, and multi-shot storytelling, so you can describe a scene instead of building it in traditional editing software. The service is currently presented as ClipDance.ai, with a notice that Seedance2.so moved to the new address while keeping the same account and credits.

What is Seedance 2.0 on ClipDance

Seedance 2.0 on ClipDance is a web-based AI video generator that turns prompts,

way to create professional 1080p video content without filming or using complex editing software. The product is part of the ClipDance.ai site, which also shows a move notice explaining that Seedance2.so is now the same service at a new address.

It is presented as a creative tool for people who want faster video production than a full post-production workflow. The homepage highlights text-to-video and image-to-video creation, and also mentions native audio plus multi-shot storytelling. That makes it closer to a prompt-driven video maker than a conventional timeline editor.

Key features

Seedance 2.0 on ClipDance emphasizes a few specific capabilities that are visible on the site:

- **Text-to-video generation**: describe a scene and generate a clip from scratch.
- **Image-to-video generation**: start with a still image and turn it into motion content.
- **Reference-based creation**: the site also lists reference-to-video, which suggests you can guide output with source material.
- **Native audio**: clips are described as having synchronized audio rather than silent footage.
- **1080p output**: the product claims professional HD video quality.
- **Multi-shot storytelling**: the landing page says it can structure output across multiple shots, not just a single static scene.
- **Free to start**: the product is advertised with a no-cost entry point.
- **Account continuity after the move**: the site says the same account and credits work on ClipDance.ai after the domain change.

The navigation also shows related tools and sections such as video extension, video editing, watermark removal, and video upscaling. Those appear to be adjacent features or tools on the site, but the core product described in the harvested material is the Seedance 2.0 AI video generator.

How to use it

Using Seedance 2.0 on ClipDance appears to follow a prompt-first workflow rather than

Choose a creation mode: the site shows options such as Video, Text to Video, Image to Video, and Reference to Video.

Add your input: enter a text description, upload an image, or provide reference material depending on the mode.

Set basic output choices: the page shows examples of aspect ratio and duration such as 16:9 and 5s, along with a 480p preview example in one spot.

Generate the clip: the app produces an AI-made video with audio and cinematic structure.

Review and refine: the site also lists my creations and video editing tools, so you can revisit generated work after the first pass.

If you are returning from the old domain, the move notice says your account and credits should remain the same. That means existing users should be able to continue under the new ClipDance.ai address without starting over.

Who it is for

Seedance 2.0 on ClipDance is a fit for people who need video output but do not want to work inside full editing software.

It may be useful for:

solo creators who want fast social or marketing clips

product teams that need quick concept videos from text prompts

designers or marketers working from still images and brand references

anyone testing AI-generated video before investing in a larger production workflow

users who prefer a browser-based creative tool with account-based credits

The site's emphasis on 1080p, native audio, and multi-shot storytelling makes it especially relevant for people who want something more polished than a basic animated image, but lighter than a full studio pipeline.

What to know before you use it

This AI video generator is shown as a browser app, but several practical details are not

Exact pricing is not fully clear: the site says free to start and mentions plans, credits, and billing, but the full cost structure is not provided in the source text.

Credit usage varies by plan and model: the page references monthly credit limits and multiple models, including a Studio tier, so consumption may depend on the mode or selected model.

Output quality depends on the chosen mode: the homepage shows different examples such as 480p previews and 1080p claims, so preview resolution and final quality may not always match.

This is not a full video editor: it is built for generation and limited AI-assisted workflows, not frame-by-frame timeline editing or advanced post-production.

Reference claims should be checked in-app: the site mentions reference-to-video and multi-shot storytelling, but the exact limits, supported file types, and maximum reference count are not fully detailed in the source text.

Use the official site for current billing and credits: because the product moved from Seedance2.so to ClipDance.ai, the most reliable source for account, pricing, and access details is the live ClipDance.ai site.

For creators who want a prompt-based way to make cinematic clips, Seedance 2.0 on ClipDance offers a focused path from idea to export. If you need current limits, billing terms, or the latest model behavior, check the official ClipDance.ai interface before you publish.

FAQ

Is Seedance 2.0 on ClipDance free to use?

What platform does Seedance 2.0 on ClipDance run on?

Can I make videos from both text and images?

Does the move from Seedance2.so affect my account?
